

"Hi, I'm **Kundan Kumar**. I have a background in Computer Science and completed a Post Graduate Diploma in Advanced Computing from C-DAC. My primary focus is on **Java backend development along with full-stack web technologies**.

I have hands-on experience working with **Java, Spring Boot, MySQL, and React** to build web applications and secure RESTful APIs.

During my training and internship at **KodNest**, I worked on creating backend modules, optimizing database queries, and connecting user interfaces built with React to backend services. I also practiced industry-level engineering through simulations with **Wells Fargo and Datacom**, where I focused on financial database modeling and setting up CI/CD automation with GitHub Actions.

To apply these skills practically, I built **Sales Savvy**, an e-commerce platform where I handled user authentication, secure payment gateway integration, and deployment using Docker.

What excites me about this role is the opportunity to start my professional journey here, learn from your team, and contribute by writing clean, reliable code for your products."
